APPROVED JURISDICTIONAL DETERMINATION FORM U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

- A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): April 26, 2018
- B. DISTRICT OFFICE, FILE NAME, AND NUMBER: CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Intermittent-1, Ephemeral-1, Ephemeral-3, Ephemeral-5, Ephemeral-7, Wetland-1, Wetland-2, and Open Water-1
- C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Kentucky County/parish/borough: Washington City: Springfield Center coordinates of site (lat/long in degree decimal format): Lat. 37.697332 °, Long. -85.186773 ° Universal Transverse Mercator: 16 S 659855.34 mE, 4173781.27 mN

Name of nearest waterbody: Frog Hollow

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Rolling Fork Name of watershed or Hydrologic Unit Code (HUC): 051401030205: Mays Creek – Beech Fork

- Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form
- D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):
 - Office (Desk)

April 24, 2018

Determination. Date:

Field Determination.

April 12, 2018

Date(s):

· ·

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required]

- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain:

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are and are not "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

- 1. Waters of the U.S.
 - a. Indicate presence of waters of U.S. in review area (check all that apply): 1
- ☐ TNWs, including territorial seas
- Wetlands adjacent to TNWs
- Relatively permanent waters² (RPWs) that flow directly or indirectly into TNWs

Boxes checked below shall be supported by completing the appropriate sections in Section III below.

² For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continnous flow at least "seasonally" (e.g., typically 3 months).

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Intermittent-1, Ephemeral-1, Ephemeral-3, Ephemeral-5, Ephemeral-7, Wetland-1, Wetland-2, and Open Water-1

- Non-RPWs that flow directly or indirectly into TNWs
- Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- Impoundments of jurisdictional waters
- ✓ Isolated (interstate or intrastate) waters, including isolated wetlands
 - b. Identify (estimate) size of waters of the U.S. in the review area:

Non-wetland waters: 1,250 linear feet: 1-3.5 width (ft) and/or 0.577 acres.

Wetlands: 0.578 acres.

- **c.** Limits (boundaries) of jurisdiction based on: Established by OHWM, 1987 Delineation Manuel Elevation of established OHWM (if known):
- 2. Non-regulated waters/wetlands (check if applicable):³
- Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional.

Explain: Wetland-1 and Open Water-1 were determined to not have a significant nexus to the nearest TNW. Described in sections III.C.3 and III.F

³ Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent":

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody⁴ is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: 25,059 acres

Drainage area: 80 acres

Average annual rainfall: 43 inches Average annual snowfall: 13 inches

(ii) Physical Characteristics:

⁴ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

(a) Relationship with TNW:

Tributary flows directly into TNW.

Tributary flows through 2 tributaries before entering

Project waters are 30 (or more) river miles from TNW.

Project waters are 1 (or less) river miles from RPW:

Project waters are 25-30 aerial (straight) miles from TNW.

Project waters are 1 (or less) aerial (straight) miles from RPW.

Project waters cross or serve as state boundaries. Explain: No.

Identify flow route to TNW⁵: Intermittent 1 to Frog Hollow to Beech Fork to Rolling Fork Tributary stream order, if known: 2

(b) General Tributary Characteristics (check all that apply):

Tributary is: ▼ Natural

Artificial (man-made). Explain:

Manipulated (man-altered). Explain: The tributary is located in an agricultural land setting and has likely been historically impacted.

⁵ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Г	other (list):	_		iorupi onan	60 m prant community

⁶A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.

Tibid.

If factors other than the OHWM were u (check all that apply):	sed to determine lateral extent of CWA jurisdiction
	 Mean High Water Mark indicated by: ☐ survey to available datum; ☐ physical markings; ☐ vegetation lines/changes in vegetation types.
(iii) Chemical Characteristics: Characterize tributary (e.g., water color is of watershed characteristics, etc.). Explain Identify specific pollutants, if known: NA	clear, discolored, oily film; water quality; general n: Water was relatively clear.

2. Chara	acteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW
(a)	Properties: Wetland Characteristics: Properties: Wetland size: Wetland-1: 0.496 acre; Wetland-2: 0.082 acre; Total Acreage: 0.578 acre Wetland type. Explain: Forested, Emergent Wetland quality. Explain: Forested wetland: moderately disturbed by maintenance Emergent Wetland: highly disturbed by mowing and agriculture activities. Project wetlands cross or serve as state boundaries. Explain: NA
	General Flow Relationship with Non-TNW: Flow is: Ephemeral Flow, No Flow Explain: Wetland-2 contributes ephemeral flow to Eph-7. does not contribute surface flow to downslope waters.
	Surface flow is: Discrete and Confined Characteristics: Surface flow from Wetland-2 has created Eph-7.
	Subsurface flow: Unknown Explain findings: Dye testing was not preformed. Dye (or other) test performed:
(c)	 Wetland Adjacency Determination with Non-TNW: □ Directly abutting □ Not directly abutting □ Discrete wetland hydrologic connection. Explain: Wetland-2 contributes flow to EPF 7 □ Ecological connection. Explain: An ecological connection for Wetland-2 with downstream waters exists via Eph-7. □ Separated by berm/barrier. Explain: Wetland-1 is separated from downstream waters by a berm/dam and does not appear to influence downstream waters via a discrete wetland hydrologic connection or an ecological connection.
(d)	Proximity (Relationship) to TNW Project wetlands are 30 (or more) river miles from TNW. Project waters are 25-30 aerial (straight) miles from TNW. Flow is from: Wetland to Navigable Waters, No Flow Estimate approximate location of wetland as within the 500-year or greater floodplain.
(ii) Ch	nemical Characteristics:

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: The wetland are likely impacted by agriculture activities and runoff.

Identify specific pollutants, if known: NA

iii) Biological Characteristics. Wetland supports (check all that apply):
Riparian buffer. Characteristics (type, average width):
Vegetation type/percent cover. Explain: Wetland-1: Forested/70%; Wetland-2:
Emergent/100%
Habitat for:
Federally Listed species. Explain findings:
Fish/spawn areas. Explain findings:
Other environmentally-sensitive species. Explain findings:
Aquatic/wildlife diversity. Explain findings: Potential habitat for amphibians at
macroinvertebrates

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 2 Approximately (0.578) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N) Size (in acres)		Directly abuts? (Y/N) Size (in acres)
No, Wetland-1	0.496	
No. Wetland-2	0.082	

Summarize overall biological, chemical and physical functions being performed: Very limited functions due to small size, surface runoff from agricultural land and mowing activities. Wetland-1 has the potential to store floodwaters, collect agriculture runoff, and provide habitat although the wetland would not contribute these functions to downstream waters. Wetland-2 has the potential to filter and direct runoff to downstream waterbodies along with providing limited habitat between maintenance/mowing activities.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:

Ephemeral-1, Ephemeral-3, and Ephemeral-5 (Eph-1, Eph-3, Eph-5): Streams Eph-1, Eph-3, and Eph-5 each carry ephemeral flow. These streams function to transport pollutants, nutrients, organic material, and flow to downstream waters and ultimately to TNWs. These streams contribute flow directly to a RPW which in turn contributes flow to the nearest TNW (Rolling Fork) approximately 70 river miles downstream. These streams have a Significant Nexus to Rolling Fork.

2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

Ephemeral-7 and Wetland-2: Wetland-2 would provide potential habitat for amphibians and macroinvertebrates and potentially provide filtration for water received from the surrounding agriculture fields. Wetland-2 contributes flow to Ephemeral-7. Ephemeral-7 functions to transport pollutants, nutrients, organic material, and flow to downstream waters and ultimately to TNWs. This stream contributes flow directly to a RPW which in turn contributes flow to the nearest TNW (Rolling Fork) approximately 70 river miles downstream. Ephemeral-7 and Wetland-2 have a Significant Nexus to Rolling Fork.

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

Wetland-1 and Open Water-1: Wetland-1 is a fringe wetland around Open Water-1 (OW-1). These features do not contribute surface water to downstream waters. OW-1 was constructed in the upper reaches of the topographical drainage of an unnamed tributary to Frog Hollow (Int-1) and appears to have an approximate watershed of 7 acres consisting of agriculture fields. The feature was constructed with a spillway for drainage. The spillway is grassed and does not exhibit indicators of receiving flow. The water level appears to be consistently 1-3 feet below the elevation of the spillway and no drainage pipes were located during the site investigation. The nearest RPW (Int-1) to the feature would be approximately 1,000 feet down slope. The connection to down slope waters is a maintained grassed drainage area surrounded by agriculture fields. This drainage way was investigated for wetland characteristics and did not meet the requirements for a wetland at the time of the field investigation. Wetland-1 and OW-1 do not contribute regular flow to downstream waters, and in the unlikely chance of a storm event which would overflow the basin, the distance to a down slope water is of sufficient length to remove any significant contributions of functions. During normal circumstances, the water collected by the feature is likely lost to evaporation, and not contributed to downstream features via a surface connection. Although the Wetland-1 and Openwater-1 are located in a topographically supported drainage of Rolling Fork, a TNW, the features were determined to lack a significant nexus to Rolling Fork.

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1.	TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
	TNWs: linear feet width (ft), Or, acres.
	Wetlands adjacent to TNWs: acres.
2.	RPWs that flow directly or indirectly into TNWs.
	Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data
	and rationale indicating that tributary is perennial: .
	Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three

months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B.

Provide rationale indicating that tributary flows seasonally: Seasonal flow was determined based on field observations (12/18/2017, 4/12/2018) and ground water influence.

Provide estimates for jurisdictional waters in the review area (check all that apply):

Tributary waters: 1015 linear feet 3.5 width (ft).

☐ Other non-wetland waters: acres.

Identify type(s) of waters:

	3.	Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.
		Provide estimates for jurisdictional waters within the review area (check all that apply): Tributary waters: 235 linear feet 1-2 width (ft). Other non-wetland waters: acres. Identify type(s) of waters:
	4.	Wetlands directly abutting an RPW that flow directly or indirectly into TNWs. Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.
	5.	Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs. Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is
		provided at Section III.C.
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.
	6.	Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs. Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
		Provide estimates for jurisdictional wetlands in the review area: 0.082 acres.
	7.	Impoundments of jurisdictional waters. As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional. □ Demonstrate that impoundment was created from "waters of the U.S.," or □ Demonstrate that water meets the criteria for one of the categories presented □ Demonstrate that water is isolated with a nexus to commerce (see E below).
E.	WI IN' AP	DLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED ETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT TERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT PLY): 10 which are or could be used by interstate or foreign travelers for recreational or other purposes.
	Γ.	from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.

 ⁸See Footnote # 3.
 ⁹ To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
 ¹⁰ Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will clevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

which are or could be used for industrial purposes by industries in interstate commerce.
Interstate isolated waters. Explain:
Other factors. Explain:
Identify water body and summarize rationale supporting determination:
Provide estimates for jurisdictional waters in the review area (check all that apply):
Tributary waters: linear feet width (ft).
Other non-wetland waters: acres.
Identify type(s) of waters:
Wetlands: acres.

F.	NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):			
	✓ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.			
	Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce Prior to the Jan 2001 Supreme Court decision in "SWANCC," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).			
	Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain: Complete determination is located in III.C.3, the determination is abridged below			
	Wetland-1 and Open Water-1 do not present a significant nexus to down slope waters. Wetland-1 is a wetland fringe around Open Water-1, which is located in a basin within the upper reach of the topographically supported drainage of Int-1, a RPW-seasonal. The wetland/pond feature has a watershed of approximately 7 acres and would rarely receive sufficient runoff to access the spillway created during construction. The feature is approximately 1,000 feet from the nearest RPW and separated from this RPW by a maintained grassed drainage way.			
	Other: (explain, if not covered above):			
	Provide acreage estimates for non-jurisdictional waters in the review area, where the <u>sole</u> potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply): Non-wetland waters (i.e., rivers, streams): linear feet width (ft). Lakes/ponds: acres. Other non-wetland waters: acres. List type of aquatic resource:			
	Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply): Non-wetland waters (i.e., rivers, streams): linear feet width (ft). Lakes/ponds: 0.487 acres. Other non-wetland waters: acres. List type of aquatic resource: Wetlands: 0.496 acres.			
SE	CTION IV: DATA SOURCES.			
A.	SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below): Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: Request for Jurisdictional Determination: Springfield Washington County Commerce Center Package — dated			
	March 19, 2018 – submitted by Ronald Thomas with Redwing Ecological Services, Inc. □ Data sheets prepared/submitted by or on behalf of the applicant/consultant. □ Office concurs with data sheets/delineation report. □ Office does not concur with data sheets/delineation report. □ Data sheets prepared by the Corps: □ Corps navigable waters' study: □ U.S. Geological Survey Hydrologic Atlas:

B. ADDITIONAL COMMENTS TO SUPPORT JD: Open Water-1 and the fringe wetland, Wetland-1, were likely historically created outside of Jurisdictional Waters, as the features are located in the headwaters of the watershed and would only receive drainage from 7 acres of surrounding land. The feature was included in this Jurisdictional Determination (JD) because there was no documentation of the area prior to the development and the feature was created with a spillway to allow drainage if necessary. While the spillway could allow for drainage, the infrequency of this surface connection along with the distance to the nearest water do not provide the necessary functions to determine Wetland-1 and Open Water-1 have a significant nexus to the remaining waters contained in the JD.

APPROVED JURISDICTIONAL DETERMINATION FORM U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

- A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): April 26, 2018
- B. DISTRICT OFFICE, FILE NAME, AND NUMBER: CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Ephemeral-2, and Wetland-3
- C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Kentucky County/parish/borough: Washington City: Springfield Center coordinates of site (lat/long in degree decimal format): Lat. 37.697332 °, Long. -85.186773 ° Universal Transverse Mercator: 16 S 659855.34 mE, 4173781.27 mN

Name of nearest waterbody: Frog Hollow

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Rolling Fork Name of watershed or Hydrologic Unit Code (HUC): 051401030205

- Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon V request.
- Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form

Determination. Date:

Field Determination.

April 12, 2018

Date(s):

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required]

- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain:

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

1. Waters of the U.S.

- Indicate presence of waters of U.S. in review area (check all that apply): 1 TNWs, including territorial seas
- Wetlands adjacent to TNWs
- Relatively permanent waters² (RPWs) that flow directly or indirectly into TNWs
- Non-RPWs that flow directly or indirectly into TNWs

¹ Boxes checked below shall be supported by completing the appropriate sections in Section III below.

² For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).

 Wetlands directly abutting RPWs that flow directly or indirectly into TNWs Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs Impoundments of jurisdictional waters Isolated (interstate or intrastate) waters, including isolated wetlands
b. Identify (estimate) size of waters of the U.S. in the review area: Non-wetland waters: 250 linear feet: 1.5 width (ft) and/or 0.009 acres. Wetlands: 0.031 acres.
c. Limits (boundaries) of jurisdiction based on: Established By OHWM, 1987 Delineation Manual
Elevation of established OHWM (if known):
2. Non-regulated waters/wetlands (cheek if applicable): ³ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain:

 $^{^3}$ Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent":

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody⁴ is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: 25,059 acres

Drainage area: 11 acres

Average annual rainfall: 43 inches Average annual snowfall: 13 inches

(ii) Physical Characteristics:

⁴ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

(a) Relationship with TNW:

Tributary flows directly into TNW.

Tributary flows through 3 tributaries before entering

Project waters are 30 (or more) river miles from TNW.

Project waters are 1 (or less) river miles from RPW.

Project waters are 25-30 aerial (straight) miles from TNW.

Project waters are 1 (or less) aerial (straight) miles from RPW.

Project waters cross or serve as state boundaries. Explain: No.

Identify flow route to TNW⁵: Unnamed tributary to Frog Hollow to Frog Hollow to Beech Fork to Rolling Fork

Tributary stream order, if known: 1

(b) General Tributary Characteristics (check all that apply):

Tributary is: Natural

- Artificial (man-made). Explain: The channel has been culverted under Corporate Drive.
- Manipulated (man-altered). Explain: The channel has likely been manipulated during historic agriculture activities.

⁵ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top of bank (estimate): Average width: 1.5 feet Average depth: 0.1-0.5 feet Average side slopes: 2:1	
Primary tributary substrate composition (check all that apply): ✓ Silts ✓ Sands Concrete ✓ Cobbles ✓ Gravel Muck ✓ Bedrock Vegetation. Type/% cover: ✓ Other. Explain:	
Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: Highly eroding headwater channel Presence of run/riffle/pool complexes. Explain: No, not observed. Tributary geometry: Relatively Straight Tributary gradient (approximate average slope): 1-3%	ing
(c) Flow: Tributary provides for: Ephemeral Flow Estimate average number of flow events in review area/year: 20 (or greater) Describe flow regime: Ephemeral Flow, flow primarily driven by precipitation events. Other information on duration and volume: NA	
Surface flow is: Discrete and Confined Characteristics:	
Subsurface flow: Unknown Explain findings: Not Observed. Dye (or other) test performed:	
Tributary has (check all that apply): Bed and banks OHWM ⁶ (check all indicators that apply): clear, natural line impressed on the bank changes in the character of soil destruction of terrestrial vegetation shelving the presence of wrack line vegetation matted down, bent, or absent leaf litter disturbed or washed away sediment deposition multiple observed or predicted flow events water staining multiple observed or predicted flow events water staining abrupt change in plant community other (list): Discontinuous OHWM. Explain: Channel appears to be impacted by agriculture practices (stream crossing) outside of the site boundaries. Area was not investigated property access was not available, the information was obtained from the agent description and aerial images.	
If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):	

⁶A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break. Thid.

☐ High Tide Line indicated by: ☐	Mean High Water Mark indicated by:
oil or seum line along shore objects	survey to available datum;
fine shell or debris deposits (foreshore)	physical markings;
physical markings/characteristics	vegetation lines/changes in vegetation types.
☐ tidal gauges	
other (list):	•

(iii) Chemical Characteristics:

Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.). Explain: Water was relatively clear. Identify specific pollutants, if known: NA

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Ephemeral-2, and Wetland-3

-6-

	(iv) Biological Characteristics. Channel supports (check all that apply): ▼ Riparian corridor. Characteristics (type, average width): Forested: 100 feet wide; Grassed: 50 feet wide
	☐ Wetland fringe. Characteristics:
	☐ Habitat for:
	Federally Listed species. Explain findings:
	☐ Fish/spawn areas. Explain findings:
	Other environmentally-sensitive species. Explain findings:
	☐ Aquatic/wildlife diversity. Explain findings:
2.	Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW
	(i) Physical Characteristics:
	(a) General Wetland Characteristics:
	Properties:
	Wetland size: 0.031 acres Wetland type. Explain: Emergent
	Wetland quality. Explain: Poor quality: Area is regularly disturbed by maintenance
act	tivities/mowing.
	Project wetlands cross or serve as state boundaries. Explain: No.
	(b) <u>General Flow Relationship with Non-TNW</u> : Flow is: Ephemeral Flow Explain: Wetland-3 contributes ephemeral flow to Ephemeral-2.
	Surface flow is: Discrete and Confined Characteristics: Ephemeral-2 has developed a channel through Wetland-3
	Subsurface flow: Unknown Explain findings: Not observed. Dye (or other) test performed:
	(c) Wetland Adjacency Determination with Non-TNW: □ Directly abutting Not directly abutting □ Discrete wetland hydrologic connection. Explain: Ephemeral-2 flows through Wetland-3 □ Ecological connection. Explain: □ Separated by berm/barrier. Explain:
	(d) Proximity (Relationship) to TNW Project wetlands are 30 (or more) river miles from TNW. Project waters are 25-30 aerial (straight) miles from TNW. Flow is from: Wetland to Navigable Waters Estimate approximate location of wetland as within the 500-year or greater floodplain.
	(ii) Chemical Characteristics: Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: The wetland are likely impacted by agriculture activities and runoff. Identify specific pollutants, if known: NA
	 (iii) Biological Characteristics. Wetland supports (check all that apply): ☑ Riparian buffer. Characteristics (type, average width): Grassed, 25 feet ☑ Vegetation type/percent cover. Explain: Emergent/90% ☐ Habitat for: ☐ Federally Listed species. Explain findings:

	Fish/spawn areas. Explain findings:
	Other environmentally-sensitive species. Explain findings:
V	Aquatic/wildlife diversity. Explain findings: Potential habitat for amphibians and
	macroinvertebrates

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 1 Approximately (0.031) acres in total are being considered in the cumulative analysis.

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Ephemeral-2, and Wetland-3

-8-

For each wetland, specify the following:

Directly abuts? (Y/N) Size (in acres)
Wetland-3, No 0.031

Directly abuts? (Y/N) Size (in acres)

Summarize overall biological, chemical and physical functions being performed: Very limited functions due to small size, surface runoff from agricultural land and mowing activities. Wetland-3 has the potential to filter and direct runoff to downstream waterbodies along with providing limited habitat between maintenance/mowing activities.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

- 1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:
- 2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Ephemeral-2, and Wetland-3

.9.

below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

Ephemeral-2 and Wetland-3: Wetland-3 would provide potential habitat for amphibians and macroinvertebrates and potentially provide filtration for water received from the surrounding agriculture fields. Wetland-3 contributes flow to Ephemeral-2. Ephemeral-2 functions to transport pollutants, nutrients, organic material, and flow to downstream waters and ultimately to TNWs. This stream contributes flow to a RPW which in turn contributes flow to the nearest TNW (Rolling Fork) approximately 70 river miles downstream. Ephemeral-2 and Wetland-3 have a Significant Nexus to Rolling Fork.

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1.	TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area: TNWs: limear feet width (ft), Or, acres. Wetlands adjacent to TNWs: acres.
2.	RPWs that flow directly or indirectly into TNWs.
	 Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B Provide rationale indicating that tributary flows seasonally:
	Provide estimates for jurisdictional waters in the review area (check all that apply): Tributary waters: linear feet width (ft). Other non-wetland waters: acres. Identify type(s) of waters:

-10-

	3.	Non-RPWs ⁸ that flow directly or indirectly into TNWs. Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.
		Provide estimates for jurisdictional waters within the review area (check all that apply): Tributary waters: 250 linear feet 1.5 width (ft). Other non-wetland waters: acres. Identify type(s) of waters:
	4.	Wetlands directly abutting an RPW that flow directly or indirectly into TNWs. Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.
	5.	Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into
		TNWs. Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.
	6.	Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs. Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
		Provide estimates for jurisdictional wetlands in the review area: 0.031 acres.
	7.	Impoundments of jurisdictional waters. As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional. □ Demonstrate that impoundment was created from "waters of the U.S.," or □ Demonstrate that water meets the criteria for one of the categories presented □ Demonstrate that water is isolated with a nexus to commerce (see E below).
E.	WI IN' AP	OLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED ETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT TERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT PLY): 10 which are or could be used by interstate or foreign travelers for recreational or other purposes. from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.

 ⁸See Footnote # 3.

 ⁹ To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.

 ¹⁰ Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

which are or could be used for industrial purposes by industries in interstate commerce. Interstate isolated waters. Explain: Other factors. Explain:
Identify water body and summarize rationale supporting determination:
Provide estimates for jurisdictional waters in the review area (check all that apply): Tributary waters: linear feet width (ft).
Other non-wetland waters: acres.
Identify type(s) of waters:
☐ Wetlands: acres.

3.	ADDITIONAL COMMENTS TO SUPPORT JD:

APPROVED JURISDICTIONAL DETERMINATION FORM U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

- A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): April 26, 2018
- B. DISTRICT OFFICE, FILE NAME, AND NUMBER: CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Intermittent-2, Intermittent-3, Ephemeral-6, Wetland-5
- C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Kentucky County/parish/borough: Washington City: Springfield

Center coordinates of site (lat/long in degree decimal format): Lat. 37.697332 °, Long. -85.186773 ° Universal Transverse Mercator: 16 S 659855.34 mE, 4173781.27 mN

Name of nearest waterbody: Haydon Branch

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Rolling Fork Name of watershed or Hydrologic Unit Code (HUC): 051401030302: Lower Cartwright Creek

- Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form
- D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):
 - Office (Desk)

Determination. Date:

April 25, 2018

Field Determination.

April 12, 2018,

Date(s):

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required]

- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain:

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

- 1. Waters of the U.S.
 - a. Indicate presence of waters of U.S. in review area (check all that apply): 1
- TNWs, including territorial seas
- Relatively permanent waters² (RPWs) that flow directly or indirectly into TNWs
- Non-RPWs that flow directly or indirectly into TNWs

¹ Boxes checked below shall be supported by completing the appropriate sections in Section III below.

² For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at icast "scasonally" (e.g., typically 3 months).

 Wetlands directly abutting RPWs that flow directly or indirectly into TNWs Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs Impoundments of jurisdictional waters Isolated (interstate or intrastate) waters, including isolated wetlands 	
b. Identify (estimate) size of waters of the U.S. in the review area: Non-wetland waters: 1,415 linear feet: 1-4 width (ft) and/or 0.12 acres. Wetlands: 0.696 acres.	
c. Limits (boundaries) of jurisdiction based on: Established by OHWM, 1987 Delineation Manual Elevation of established OHWM (if known):	
 Non-regulated waters/wetlands (check if applicable):³ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain: 	to

 $^{^3}$ Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent":

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody⁴ is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: 30,119 acres Drainage area: 220 acres

Average annual rainfall: 43 inches Average annual snowfall: 13 inches

(ii) Physical Characteristics:

⁴ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

(a) Relationship with TNW:

Tributary flows directly into TNW.

Tributary flows through 3 tributaries before entering

Project waters are 30 river miles from TNW.

Project waters are 1 (or less) river miles from RPW.

Project waters are 25-30 aerial (straight) miles from TNW.

Project waters are 1 (or less) aerial (straight) miles from RPW.

Project waters cross or serve as state boundaries. Explain: No.

Identify flow route to TNW⁵: Haydon Branch (Int-2) to Shay Branch to Road Run to Cartwright Creek to Beech Fork to Rolling Fork

Tributary stream order, if known: 3

(b) General Tributary Characteristics (check all that apply):

Tributary is: 🗹 Natural

- Artificial (man-made). Explain: Stream is culverted under Hwy. 152.
- Manipulated (man-altered). Explain: The channel has likely been manipulated during historic agricultural activities.

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Intermittent-2, Intermittent-3, Ephemeral-6, Wetland-5

⁵ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

	Av	erage width: 1- erage depth: 0. erage side slop	.25-1 feet	p oi	bank (estim	iate)	:

		Federally Listed species. Explain findings: Fish/spawn areas. Explain findings:

П	Other environmentally-sensitive species. Explain findings:
V	Aquatic/wildlife diversity. Explain findings: Potential habitat for amphibians and
	macroinvertebrates.

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: 1 Approximately (0.696) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

Directly abuts? (Y/N) Size (in acres)
Wetland-5: Yes 0.696

Directly abuts? (Y/N) Size (in acres)

Summarize overall biological, chemical and physical functions being performed: Limited functions due to surface runoff from surrounding agricultural land uses, maintenance activities/mowing, and the small size if the wetland.

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:

Ephemeral-6: Ephemeral-6 carries ephemeral flow and functions to transport pollutants, nutrients, organic material, and flow to downstream waters and ultimately to TNWs. Ephemeral-6 contributes flow to a wetland abutting an RPW (Intermittent-2, Haydon Branch) which in turn contributes flow to the nearest TNW (Rolling Fork) approximately 50 river miles downstream. The stream has a significant nexus to Rolling Fork.

- 2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:
- 3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D.	DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECTIONAL FINDINGS.	ECT
	WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):	

W.	WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):	
1.	TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area: TNWs: linear feet width (ft), Or, acres. Wetlands adjacent to TNWs: acres.	
2.	RPWs that flow directly or indirectly into TNWs. □ Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: . □ Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: The flow regimes for Intermittent-2 and Intermittent-3 were determined by field observations (April 12, 2018) (Int-2, Int-3), watershed size (Int-2, Int-3), and identification on USGS Quad Maps (Int-2). Provide estimates for jurisdictional waters in the review area (check all that apply): □ Tributary waters: 1,360 linear feet 2-4 width (ft). □ Other non-wetland waters: acres. Identify type(s) of waters:	

3.	Non-RPWs ⁸ that flow directly or indirectly into TNWs. Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.
	Provide estimates for jurisdictional waters within the review area (check all that apply): Tributary waters: 55 linear feet 1 width (ft). Other non-wetland waters: acres. Identify type(s) of waters:
4.	Wetlands directly abutting an RPW that flow directly or indirectly into TNWs. ✓ Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. ✓ Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: ✓ Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: Wetland-5 is a fringe wetland along streams Intermittent-2 and Intermittent-3. The wetland shares flow with the stream by providing flow to and receiving flow from the abutting streams
	Provide acreage estimates for jurisdictional wetlands in the review area: 0.696 acres.
5.	Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs. ☐ Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.
	Provide acreage estimates for jurisdictional wetlands in the review area: acres.
6.	Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs. Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
	Provide estimates for jurisdictional wetlands in the review area: acres.
7.	Impoundments of jurisdictional waters. As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional. □ Demonstrate that impoundment was created from "waters of the U.S.," or □ Demonstrate that water meets the criteria for one of the categories presented □ Demonstrate that water is isolated with a nexus to commerce (see E below).
WJ IN'	DLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED ETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT FERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT PLY):10

E.

 ⁸ See Footnote # 3.
 9 To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
 10 Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

which are or could be used by interstate or foreign travelers for recreational or other purposes.	
from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.	
which are or could be used for industrial purposes by industries in interstate commerce.	
☐ Interstate isolated waters. Explain:	
Other factors. Explain:	
Identify water body and summarize rationale supporting determination:	
Provide estimates for jurisdictional waters in the review area (check all that apply):	
Tributary waters: linear feet width (ft).	
Other non-wetland waters: acres.	
Identify type(s) of waters:	
☐ Wetlands: acres.	

١.	ON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):
	☐ If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
	Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce. Prior to the Jan 2001 Supreme Court decision in "SWANCC," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
	Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain:
	Other: (explain, if not covered above):
	ovide acreage estimates for non-jurisdictional waters in the review area, where the <u>sole</u> potential basis jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use water for irrigated agriculture), using best professional judgment (check all that apply): Non-wetland waters (i.e., rivers, streams): linear feet width (ft). Lakes/ponds: acres. Other non-wetland waters: acres. List type of aquatic resource: . Wetlands: acres.
	ovide acreage estimates for non-jurisdictional waters in the review area that do not meet the ignificant Nexus" standard, where such a finding is required for jurisdiction (check all that apply): Non-wetland waters (i.e., rivers, streams): linear feet width (ft). Lakes/ponds: acres. Other non-wetland waters: acres. List type of aquatic resource:.
	Wetlands: acres.

APPROVED JURISDICTIONAL DETERMINATION FORM U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

- A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): April 26, 2018
- B. DISTRICT OFFICE, FILE NAME, AND NUMBER: CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Ephemeral-4
- C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Kentucky County/parish/borough: Washington City: Springfield Center coordinates of site (lat/long in degree decimal format): Lat. 37.697332°, Long. -85.186773° Universal Transverse Mercator: 16 S 659855.34 mE, 4173781.27 mN

Name of nearest waterbody: Haydon Branch

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Rolling Fork Name of watershed or Hydrologic Unit Code (HUC): 051401030302: Lower Cartwright Creek

- Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon V
- Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form
- D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):
 - Office (Desk) Determination. Date:

April 25, 2018

Field Determination.

Date(s):

April 12, 2018,

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required]

- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain:

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

- 1. Waters of the U.S.
 - Indicate presence of waters of U.S. in review area (check all that apply): 1

TNWs, including territorial seas

Wetlands adjacent to TNWs

- Relatively permanent waters² (RPWs) that flow directly or indirectly into TNWs
- Non-RPWs that flow directly or indirectly into TNWs

¹ Boxes checked below shall be supported by completing the appropriate sections in Section III below.

² For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "scasonally" (e.g., typically 3 months).

Wetlands directly abutting RPWs that flow directly or indirectly into TNWs Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs Impoundments of jurisdictional waters Isolated (interstate or intrastate) waters, including isolated wetlands
b. Identify (estimate) size of waters of the U.S. in the review area: Non-wetland waters: 315 linear feet: 1.5 width (ft) and/or 0.011 acres. Wetlands: acres.
c. Limits (boundaries) of jurisdiction based on: Established by OHWM
Elevation of established OHWM (if known):
 Non-regulated waters/wetlands (check if applicable):³ Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional. Explain:

 $^{^3}$ Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

1. TNW

Identify TNW:

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent":

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody⁴ is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size: 30,119 acres

Drainage area: 8 acres

Average annual rainfall: 43 inches Average annual snowfall: 13 inches

(ii) Physical Characteristics:

⁴ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

(a) Relationship with TNW:

Tributary flows directly into TNW.

Tributary flows through 4 tributaries before entering

Project waters are 30 (or more) river miles from TNW.

Project waters are 1 (or less) river miles from RPW.

Project waters are 25-30 aerial (straight) miles from TNW.

Project waters are 1 (or less) aerial (straight) miles from RPW.

Project waters cross or serve as state boundaries. Explain: No.

Identify flow route to TNW⁵: Unnamed Tributary (Eph-4) to Haydon Branch to Shay Branch to Road Run to Cartwright Creek to Beech Fork to Rolling Fork
Tributary stream order, if known: 1

(b) General Tributary Characteristics (check all that apply):

Tributary is:
✓ Natural

Artificial (man-made). Explain:

Manipulated (man-altered). Explain: The channel has likely been manipulated during historic agricultural activities.

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Ephemeral-4

⁵ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

Tributary properties with respect to top Average width: 1.5 feet Average depth: 0.25-0.5 feet Average side slopes: 2:1	p of bank (estimate):
Primary tributary substrate composition ✓ Silts ✓ Sands ✓ Cobbles ✓ Gravel ✓ Bedrock ✓ Vegetation. ✓ Other. Explain:	(check all that apply): Concrete Muck Type/% cover: Vines/herbs, 20%
(c) Flow: Tributary provides for: Ephemeral Flow Estimate average number of flow events Describe flow regime: Ephemeral flows surrounding agriculture field from precipitation events Other information on duration and volume	s in review area/year: 20 (or greater) ow regime, the channel receives flow from the ents.
Surface flow is: Discrete and Confined	Characteristics:
Subsurface flow: Unknown Explain fin Dye (or other) test performed:	dings: Not Observed.
shelving vegetation matted down, bent, or absent leaf litter disturbed or washed away sediment deposition water staining other (list): Discontinuous OHWM. ⁷ Explain practices (stream crossing) outside	the presence of litter and debris destruction of terrestrial vegetation the presence of wrack line sediment sorting sediment sorting seour multiple observed or predicted flow events abrupt change in plant community channel appears to be impacted by agriculture de of the site boundaries.
If factors other than the OHWM were us (check all that apply):	sed to determine lateral extent of CWA jurisdiction

⁶A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.

oil or scum line along shore objects survey to available datum;	
C 1 11 - 1 1 - 1 1 - 1 1 - 1 - 1 - 1 - 1	
fine shell or debris deposits (foreshore) physical markings;	
physical vegetation lines/changes in vegetation types.	
☐ tidal gauges	

(iii) Chemical Characteristics:

Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.). Explain: Pooled water was relatively clear, sediment deposits were visible on vegetation.

Identify specific pollutants, if known: NA

-6

	(iv) Biological Characteristics. Channel supports (check all that apply):
	Riparian corridor. Characteristics (type, average width): Forested, 100 feet wide
	☐ Wetland fringe. Characteristics:
	☐ Habitat for:
	Federally Listed species. Explain findings:
	Fish/spawn areas. Explain findings:
	Other environmentally-sensitive species. Explain findings:
	Aquatic/wildlife diversity. Explain findings:
2	
Z,	Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW
	(i) Physical Characteristics:
	(a) General Wetland Characteristics:
	Properties: Wetland size: acres
	Wetland type. Explain:
	Wetland quality. Explain:
	Project wetlands cross or serve as state boundaries. Explain:
	(b) General Flow Relationship with Non-TNW:
	Flow is: Explain:
	Surface flow is: Characteristics:
	Subsurface flow: Explain findings: Dye (or other) test performed:
	(c) Wetland Adjacency Determination with Non-TNW:
	Directly abutting
	Not directly abutting
	☐ Discrete wetland hydrologic connection. Explain: ☐ Ecological connection. Explain:
	Separated by berm/barrier. Explain:
	1
	(d) <u>Proximity (Relationship) to TNW</u> Project wetlands are river miles from TNW.
	Project waters are aerial (straight) miles from TNW.
	Flow is from:
	Estimate approximate location of wetland as within the floodplain.
	(ii) Chemical Characteristics:
	Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality;
	general watershed characteristics; etc.). Explain:
	Identify specific pollutants, if known:
	(iii) Biological Characteristics. Wetland supports (check all that apply):
	Riparian buffer. Characteristics (type, average width):
	Vegetation type/percent cover. Explain:
	Habitat for:
	Federally Listed species. Explain findings:
	☐ Fish/spawn areas. Explain findings: ☐ Other environmentally-sensitive species. Explain findings:
	Some environmentary-sensitive species. Explain initialities. Aquatic/wildlife diversity. Explain findings:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis:

Approximately () acres in total are being considered in the cumulative analysis.

-8-

For each wetland, specify the following:

Directly abuts? (Y/N) Size (in acres)

Directly abuts? (Y/N) Size (in acres)

Summarize overall biological, chemical and physical functions being performed:

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry
 pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a
 TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:

Ephemeral-4: Ephemeral-4 carries ephemeral flow and functions to transport pollutants, nutrients, organic material, and flow to downstream waters and ultimately to TNWs. Ephemeral-4 contributes flow to a RPW (Haydon Branch) which in turn contributes flow to the nearest TNW (Rolling Fork) approximately 50 river miles downstream. The stream has a significant nexus to Rolling Fork.

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Ephemeral-4

-9-

- 2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:
- 3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:
- D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1.	TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area: ☐ TNWs: linear feet width (ft), Or, acres. ☐ Wetlands adjacent to TNWs: acres.
2.	RPWs that flow directly or indirectly into TNWs.
	 Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B Provide rationale indicating that tributary flows seasonally:
	Provide estimates for jurisdictional waters in the review area (check all that apply): Tributary waters: linear feet width (ft). Other non-wetland waters: acres. Identify type(s) of waters:

-10-

	3.	Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.
		Provide estimates for jurisdictional waters within the review area (check all that apply): Tributary waters: 315 linear feet 1.5 width (ft). Other non-wetland waters: acres. Identify type(s) of waters:
	4.	Wetlands directly abutting an RPW that flow directly or indirectly into TNWs. Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.
	5.	Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.
		Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.
·	6.	Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs. Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
		Provide estimates for jurisdictional wetlands in the review area: acres.
	7.	Impoundments of jurisdictional waters. ⁹ As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional. ☐ Demonstrate that impoundment was created from "waters of the U.S.," or ☐ Demonstrate that water meets the criteria for one of the categories presented ☐ Demonstrate that water is isolated with a nexus to commerce (see E below).
E.	WI IN AP	OLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED ETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT TERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT PLY): 10 which are or could be used by interstate or foreign travelers for recreational or other purposes. from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
	*	

 ⁸See Footnote # 3.
 9 To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.
 10 Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

B. ADDITIONAL COMMENTS TO SUPPORT JD:

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Ephemeral-4 -14-

APPROVED JURISDICTIONAL DETERMINATION FORM U.S. Army Corps of Engineers

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

SECTION I: BACKGROUND INFORMATION

- A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): April 26, 2018
- B. DISTRICT OFFICE, FILE NAME, AND NUMBER: CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Wetland-4
- C. PROJECT LOCATION AND BACKGROUND INFORMATION:

State: Kentucky County/parish/borough: Washington City: Springfield
Center coordinates of site (lat/long in degree decimal format): Lat. 37.697332 °, Long. -85.186773 °
Universal Transverse Mercator: 16 S 659855.34 mE, 4173781.27 mN

Name of nearest waterbody: Frog Hollow

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Rolling Fork Name of watershed or Hydrologic Unit Code (HUC): 051401030205

- Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form
- D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):
 - Office (Desk)

April 25, 2018

Determination. Date: Field Determination.

April 12, 2018,

Date(s):

SECTION II: SUMMARY OF FINDINGS

A. RHA SECTION 10 DETERMINATION OF JURISDICTION.

There are no "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. [Required]

- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain:

B. CWA SECTION 404 DETERMINATION OF JURISDICTION.

There are no "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. [Required]

1. Waters of the U.S.

a	. Indicate presence of waters of U.S. in review area (check all that apply):
	TNWs, including territorial seas
\Box	Wetlands adjacent to TNWs
[]	Relatively permanent waters ² (RPWs) that flow directly or indirectly into TNWs
J.,	Non-RPWs that flow directly or indirectly into TNWs

¹ Boxes checked below shall be supported by completing the appropriate sections in Section III below.

² For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).

	Wetlands directly abutting RPWs that flow directly or indirectly into TNWs	
200	Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs	
<u> </u> }	Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs	
	Impoundments of jurisdictional waters	
	Isolated (interstate or intrastate) waters, including isolated wetlands	
b. Identify (estimate) size of waters of the U.S. in the review area: Non-wetland waters: linear feet: width (ft) and/or acres. Wetlands: acres.		

c. Limits (boundaries) of jurisdiction based on: Not Applicable

Elevation of established OHWM (if known):

2. Non-regulated waters/wetlands (check if applicable):3

Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional.

Explain: Wetland-4 is a geographically isolated wetland created in the uplands. Wetland-4 is a depression, likely a historic agriculture pond, which has developed wetland characteristics. The feature is located on a ridge top and does not have a connection to jurisdictional waters.

³ Supporting documentation is presented in Section III.F.

SECTION III: CWA ANALYSIS

A. TNWs AND WETLANDS ADJACENT TO TNWs

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, sec Section III.B below.

1. TNW

Identify TNW:

Summarize rationale supporting determination:

2. Wetland adjacent to TNW

Summarize rationale supporting conclusion that wetland is "adjacent":

B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are "relatively permanent waters" (RPWs), i.e. tributaries that typically flow year-round or have continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody⁴ is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

1. Characteristics of non-TNWs that flow directly or indirectly into TNW

(i) General Area Conditions:

Watershed size:

Drainage area:

Average annual rainfall:

Average annual snowfall:

(ii) Physical Characteristics:

⁴ Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

(a) Relationship with TIVW.
Tributary flows directly into TNW.
Tributary flows through tributaries before entering
Project waters are river miles from TNW.
Project waters are river miles from RPW.
Project waters are aerial (straight) miles from TNW.
Project waters are aerial (straight) miles from RPW.
Project waters cross or serve as state boundaries. Explain
Identify flow route to TNW ⁵ : Tributary stream order, if known:
(b) General Tributary Characteristics (check all that apply):
Tributary is: ☐ Natural
Artificial (man-made). Explain:
Manipulated (man-altered). Explain:

⁵ Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

	Average width: feet Average depth: feet Average side slopes:
	Primary tributary substrate composition (check all that apply): ☐ Silts ☐ Sands ☐ Concrete ☐ Cobbles ☐ Gravel ☐ Muck ☐ Bedrock ☐ Vegetation. Type/% cover: ☐ Other. Explain:
	Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: Presence of run/riffle/pool complexes. Explain: Tributary geometry: Choose an item. Tributary gradient (approximate average slope): %
	(c) Flow: Tributary provides for: Estimate average number of flow events in review area/year: Describe flow regime: Other information on duration and volume:
	Surface flow is: Characteristics:
	Subsurface flow: Explain findings: Dye (or other) test performed:
	Tributary has (check all that apply): Bed and banks OHWM ⁶ (check all indicators that apply): clear, natural line impressed on the hearts The presence of litter and debris
	on the bank changes in the character of soil destruction of terrestrial vegetation
	☐ shelving ☐ the presence of wrack line
	vegetation matted down, bent, sediment sorting or absent leaf litter disturbed or washed socur
	away □ sediment deposition □ multiple observed or predicted flow events □ water staining □ other (list): □ Discontinuous OHWM. ⁷ Explain:
C-11 - 11	If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction
(check all	that apply):

⁶A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break. 'Ibid.

П	fine shell or debris deposits (foreshore)	Γ	physical markings;
	physical markings/characteristics	Г	vegetation lines/changes in vegetation types.
П	tidal gauges		
	other (list):		

(iii) Chemical Characteristics:

Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.). Explain: Identify specific pollutants, if known:

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Wetland-4

	(IV) . 	Biological Characteristics. Channel supports (check all that apply): Riparian corridor. Characteristics (type, average width):
	Γ	
	Γ	
	F	Federally Listed species. Explain findings:
		Fish/spawn areas. Explain findings:
		Other environmentally-sensitive species. Explain findings:
		Aquatic/wildlife diversity. Explain findings:
_	CI.	
2.		acteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW
		hysical Characteristics:
	(8	a) General Wetland Characteristics:
		Properties: Wetland size: acres
	,	Wetland type. Explain:
		Wetland quality. Explain:
		Project wetlands cross or serve as state boundaries. Explain:
	(t	o) General Flow Relationship with Non-TNW:
		Flow is: Explain:
		Surface flow is:
		Characteristics:
		Subsurface flow: Explain findings: Dye (or other) test performed:
-	(c	 Wetland Adjacency Determination with Non-TNW: □ Directly abutting □ Not directly abutting □ Discrete wetland hydrologic connection. Explain: □ Ecological connection. Explain: □ Separated by berm/barrier. Explain:
	(d) Proximity (Relationship) to TNW
	`	Project wetlands are river miles from TNW.
		Project waters are aerial (straight) miles from TNW.
		Flow is from:
		Estimate approximate location of wetland as within the floodplain.
	Cl	hemical Characteristics: haracterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: entify specific pollutants, if known:
	(iii)	
	` ́Г	Biological Characteristics. Wetland supports (check all that apply): Riparian buffer. Characteristics (type, average width): Vegetation type/percent cover. Explain: Habitat for:
		Federally Listed species. Explain findings:
		Fish/spawn areas. Explain findings:
		Other environmentally-sensitive species. Explain findings: Aquatic/wildlife diversity. Explain findings:

3. Characteristics of all wetlands adjacent to the tributary (if any)

All wetland(s) being considered in the cumulative analysis: Approximately () acres in total are being considered in the cumulative analysis.

-8-

For each wetland, specify the following:

Directly abuts? (Y/N) Size (in acres)

Directly abuts? (Y/N) Size (in acres)

Summarize overall biological, chemical and physical functions being performed:

C. SIGNIFICANT NEXUS DETERMINATION

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:

- 1. Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D:
- 2. Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Wetland-4

-9.

3. Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW. Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D:

D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):

1.	TNWs and Adjacent Wetlands. Check all that apply and provide size estimates in review area:
	TNWs: linear feet width (ft), Or, acres.
	Wetlands adjacent to TNWs: acres.
2.	RPWs that flow directly or indirectly into TNWs.
	Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data
	and rationale indicating that tributary is perennial: .
	Tributaries of TNW where tributaries have continuous flow "seasonally" (e.g., typically three
	months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B
	Provide rationale indicating that tributary flows seasonally: .
	Provide estimates for jurisdictional waters in the review area (check all that apply):
	Tributary waters: linear feet width (ft).
	Other non-wetland waters: acres.
	Identify type(s) of waters:

-10-

	3.	Non-RPWs ⁸ that flow directly or indirectly into TNWs. Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.
		Provide estimates for jurisdictional waters within the review area (check all that apply): Tributary waters: linear feet width (ft). Other non-wetland waters: acres. Identify type(s) of waters:
	4.	Wetlands directly abutting an RPW that flow directly or indirectly into TNWs. Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands. Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: Wetlands directly abutting an RPW where tributaries typically flow "seasonally." Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW:
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.
	5.	Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.
		Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisidictional. Data supporting this conclusion is provided at Section III.C.
		Provide acreage estimates for jurisdictional wetlands in the review area: acres.
	6.	Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs. Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.
		Provide estimates for jurisdictional wetlands in the review area: acres.
٠	7.	Impoundments of jurisdictional waters. As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional. □ Demonstrate that impoundment was created from "waters of the U.S.," or □ Demonstrate that water meets the criteria for one of the categories presented □ Demonstrate that water is isolated with a nexus to commerce (see E below).
E.	W) IN	OLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED ETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT TERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT PLY): 10 which are or could be used by interstate or foreign travelers for recreational or other purposes.
		from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.

 ^{*}See Footnote # 3.
 *To complete the analysis rofer to the key in Section III.D.6 of the Instructional Guidebook.
 *Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

which are or could be used for industrial purposes by industries in interstate commerce. Interstate isolated waters. Explain: Other factors. Explain:	
Identify water body and summarize rationale supporting determination:	
Provide estimates for jurisdictional waters in the review area (check all that apply): Tributary waters: linear feet width (ft).	
Other non-wetland waters: acres.	
Identify type(s) of waters:	
□ Wetlands: acres.

Other information (please specify):

B. ADDITIONAL COMMENTS TO SUPPORT JD: Wetland-4 is a geographically isolated wetland created in the uplands. Wetland-4 is a closed depression, likely a historic agriculture pond, which has developed wetland characteristics. Wetland-4 is located on a ridge top and does not have a connection to jurisdictional waters. The water level in Wetland-4 would need to rise approximately 4 feet in order to exit the closed depression. The watershed of Wetland-4 would not contribute sufficient precipitation to cause the closed depression to overflow its banks and sheetflow down slope to eventually reach jurisdictional waters.

CELRL-RDS, Springfield Washington County Commerce Center, LRL-2018-274-cat: Wetland-4
