

**APPROVED JURISDICTIONAL DETERMINATION FORM**  
**U.S. Army Corps of Engineers**

This form should be completed by following the instructions provided in Section IV of the JD Form Instructional Guidebook.

**SECTION I: BACKGROUND INFORMATION**

**A. REPORT COMPLETION DATE FOR APPROVED JURISDICTIONAL DETERMINATION (JD): September 23, 2019**

**B. DISTRICT OFFICE, FILE NAME, AND NUMBER: Louisville District, LRL-2019-851, FSO St. Joseph Avenue**

**C. PROJECT LOCATION AND BACKGROUND INFORMATION:**

State: IN County/parish/borough: Vanderburgh City: Evansville

Center coordinates of site (lat/long in degree decimal format): Lat. 38.0305 °, Long. -87.5967 °

Universal Transverse Mercator: 16 S 447582.96 m E 4209360.10 m N

Name of nearest waterbody: Locust Creek

Name of nearest Traditional Navigable Water (TNW) into which the aquatic resource flows: Ohio River

Name of watershed or Hydrologic Unit Code (HUC): 05140202

- Check if map/diagram of review area and/or potential jurisdictional areas is/are available upon request.
- Check if other sites (e.g., offsite mitigation sites, disposal sites, etc...) are associated with this action and are recorded on a different JD form

**D. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):**

- Office (Desk) Determination. Date: September 19, 2019
- Field Determination. Date(s): July 31, 2019: Corps field visit: Sept 20, 2019

**SECTION II: SUMMARY OF FINDINGS**

**A. RHA SECTION 10 DETERMINATION OF JURISDICTION.**

There *Choose an item.* "navigable waters of the U.S." within Rivers and Harbors Act (RHA) jurisdiction (as defined by 33 CFR part 329) in the review area. *[Required]*

- Waters subject to the ebb and flow of the tide.
- Waters are presently used, or have been used in the past, or may be susceptible for use to transport interstate or foreign commerce. Explain: *Click here to enter text.*

**B. CWA SECTION 404 DETERMINATION OF JURISDICTION.**

There *Choose an item.* "waters of the U.S." within Clean Water Act (CWA) jurisdiction (as defined by 33 CFR part 328) in the review area. *[Required]*

**1. Waters of the U.S.**

**a. Indicate presence of waters of U.S. in review area (check all that apply):<sup>1</sup>**

- TNWs, including territorial seas
- Wetlands adjacent to TNWs
- Relatively permanent waters<sup>2</sup> (RPWs) that flow directly or indirectly into TNWs
- Non-RPWs that flow directly or indirectly into TNWs
- Wetlands directly abutting RPWs that flow directly or indirectly into TNWs
- Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs

<sup>1</sup> Boxes checked below shall be supported by completing the appropriate sections in Section III below.

<sup>2</sup> For purposes of this form, an RPW is defined as a tributary that is not a TNW and that typically flows year-round or has continuous flow at least "seasonally" (e.g., typically 3 months).

- Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs
- Impoundments of jurisdictional waters
- Isolated (interstate or intrastate) waters, including isolated wetlands

**b. Identify (estimate) size of waters of the U.S. in the review area:**

Non-wetland waters:

S01 (Non RPW) 853 linear feet: 2 width (ft)  
S02 (Non RPW) 293 linear feet: 1 width (ft)  
S03, Locust Creek (RPW) 726 linear feet: 24 width (ft)

Wetlands:

Wetland 01 – PEM (Wetlands adjacent to non-RPW that flow directly or indirectly into TNWs) - .17 acres  
Wetland 02 – PFO (Wetlands adjacent to non-RPW that flow directly or indirectly into TNWs) - .11 acres  
Wetland 03 – PFO (Wetlands directly abutting RPWs that flow directly or indirectly into TNWs) - .46 acres

**c. Limits (boundaries) of jurisdiction based on: 1987 Delineation Manual**

Elevation of established OHWM (if known):

**2. Non-regulated waters/wetlands (check if applicable):<sup>3</sup>**

- Potentially jurisdictional waters and/or wetlands were assessed within the review area and determined to be not jurisdictional.

Explain: The review area also includes 3 reported isolated wetlands.

Wetland 4 is PEM 0.03 acres

Wetland 5 is PEM 0.05 acres

Wetland 6 is PEM 0.07 acres

Wetlands 4, 5, and 6 are located in poorly drained depressions on the landscape and do not appear to have a surface water connection.

**SECTION III: CWA ANALYSIS**

**A. TNWs AND WETLANDS ADJACENT TO TNWs**

The agencies will assert jurisdiction over TNWs and wetlands adjacent to TNWs. If the aquatic resource is a TNW, complete Section III.A.1 and Section III.D.1. only; if the aquatic resource is a wetland adjacent to a TNW, complete Sections III.A.1 and 2 and Section III.D.1.; otherwise, see Section III.B below.

**1. TNW**

Identify TNW:

Summarize rationale supporting determination:

**2. Wetland adjacent to TNW**

Summarize rationale supporting conclusion that wetland is “adjacent”:

**B. CHARACTERISTICS OF TRIBUTARY (THAT IS NOT A TNW) AND ITS ADJACENT WETLANDS (IF ANY):**

This section summarizes information regarding characteristics of the tributary and its adjacent wetlands, if any, and it helps determine whether or not the standards for jurisdiction established under *Rapanos* have been met.

The agencies will assert jurisdiction over non-navigable tributaries of TNWs where the tributaries are “relatively permanent waters” (RPWs), i.e. tributaries that typically flow year-round or have

<sup>3</sup> Supporting documentation is presented in Section III.F.

continuous flow at least seasonally (e.g., typically 3 months). A wetland that directly abuts an RPW is also jurisdictional. If the aquatic resource is not a TNW, but has year-round (perennial) flow, skip to Section III.D.2. If the aquatic resource is a wetland directly abutting a tributary with perennial flow, skip to Section III.D.4.

A wetland that is adjacent to but that does not directly abut an RPW requires a significant nexus evaluation. Corps districts and EPA regions will include in the record any available information that documents the existence of a significant nexus between a relatively permanent tributary that is not perennial (and its adjacent wetlands if any) and a traditional navigable water, even though a significant nexus finding is not required as a matter of law.

If the waterbody<sup>4</sup> is not an RPW, or a wetland directly abutting an RPW, a JD will require additional data to determine if the waterbody has a significant nexus with a TNW. If the tributary has adjacent wetlands, the significant nexus evaluation must consider the tributary in combination with all of its adjacent wetlands. This significant nexus evaluation that combines, for analytical purposes, the tributary and all of its adjacent wetlands is used whether the review area identified in the JD request is the tributary, or its adjacent wetlands, or both. If the JD covers a tributary with adjacent wetlands, complete Section III.B.1 for the tributary, Section III.B.2 for any onsite wetlands, and Section III.B.3 for all wetlands adjacent to that tributary, both onsite and offsite. The determination whether a significant nexus exists is determined in Section III.C below.

#### 1. Characteristics of non-TNWs that flow directly or indirectly into TNW

##### (i) General Area Conditions:

Watershed size: 1037 square miles  
Drainage area: 11.102 square miles  
Average annual rainfall: 45 inches  
Average annual snowfall: 11 inches

##### (ii) Physical Characteristics:

###### (a) Relationship with TNW:

- Tributary flows directly into TNW.  
 Tributary flows through 2 tributaries before entering

Project waters are 5-10 river miles from TNW.  
Project waters are 1 (or less) river miles from RPW.  
Project waters are 2-5 aerial (straight) miles from TNW.  
Project waters are 1 (or less) aerial (straight) miles from RPW.  
Project waters cross or serve as state boundaries. Explain:

Identify flow route to TNW<sup>5</sup>: Locust Creek to Pigeon Creek to Ohio River  
Tributary stream order, if known: *Click here to enter text.*

###### (b) General Tributary Characteristics (check all that apply):

- Tributary is:  Natural  
 Artificial (man-made). Explain: *Click here to enter text.*  
 Manipulated (man-altered). Explain: S01 appears to have been ditched

#### Tributary properties with respect to top of bank (estimate):

Average width: 7 feet  
Average depth: 1.5 feet  
Average side slopes: 2:1

#### Primary tributary substrate composition (check all that apply):

- |                                           |                                 |                                   |
|-------------------------------------------|---------------------------------|-----------------------------------|
| <input checked="" type="checkbox"/> Silts | <input type="checkbox"/> Sands  | <input type="checkbox"/> Concrete |
| <input type="checkbox"/> Cobbles          | <input type="checkbox"/> Gravel | <input type="checkbox"/> Muck     |

<sup>4</sup> Note that the Instructional Guidebook contains additional information regarding swales, ditches, washes, and erosional features generally and in the arid West.

<sup>5</sup> Flow route can be described by identifying, e.g., tributary a, which flows through the review area, to flow into tributary b, which then flows into TNW.

- Bedrock       Vegetation. Type/% cover: *Click here to enter text.*  
 Other. Explain: Clay/Hardpan

Tributary condition/stability [e.g., highly eroding, sloughing banks]. Explain: low stability/high erosion

Presence of run/riffle/pool complexes. No Explain:  
Tributary geometry: Relatively Straight  
Tributary gradient (approximate average slope): 1.4%

(c) Flow:

Tributary provides for: Ephemeral Flow  
Estimate average number of flow events in review area/year: 20 (or greater)  
Describe flow regime: S01 and S02 likely have flow after rain events  
Other information on duration and volume: *Click here to enter text.*

Surface flow is: *Choose an item.* Characteristics: *Click here to enter text.*

Subsurface flow: *Choose an item.* Explain findings: *Click here to enter text.*

- Dye (or other) test performed: *Click here to enter text.*

Tributary has (check all that apply):

- Bed and banks  
 OHWM<sup>6</sup> (check all indicators that apply):  
 clear, natural line impressed on the bank       the presence of litter and debris  
 changes in the character of soil       destruction of terrestrial vegetation  
 shelving       the presence of wrack line  
 vegetation matted down, bent, or absent       sediment sorting  
 leaf litter disturbed or washed away       scour  
 sediment deposition       multiple observed or predicted flow events  
 water staining       abrupt change in plant community *Click here to enter text.*  
 other (list): *Click here to enter text.*  
 Discontinuous OHWM.<sup>7</sup> Explain: *Click here to enter text.*

If factors other than the OHWM were used to determine lateral extent of CWA jurisdiction (check all that apply):

- High Tide Line indicated by:       Mean High Water Mark indicated by:  
 oil or scum line along shore objects       survey to available datum;  
 fine shell or debris deposits (foreshore)       physical markings;  
 physical markings/characteristics       vegetation lines/changes in vegetation types.  
 tidal gauges  
 other (list): *Click here to enter text.*

(iii) **Chemical Characteristics:**

Characterize tributary (e.g., water color is clear, discolored, oily film; water quality; general watershed characteristics, etc.). Explain: S03, turbidity levels were not elevated at the time of survey.

<sup>6</sup>A natural or man-made discontinuity in the OHWM does not necessarily sever jurisdiction (e.g., where the stream temporarily flows underground, or where the OHWM has been removed by development or agricultural practices). Where there is a break in the OHWM that is unrelated to the waterbody's flow regime (e.g., flow over a rock outcrop or through a culvert), the agencies will look for indicators of flow above and below the break.

<sup>7</sup>Ibid.

Identify specific pollutants, if known: Agricultural runoff

**(iv) Biological Characteristics. Channel supports (check all that apply):**

- Riparian corridor. Characteristics (type, average width):
  - S01 forested riparian 15 -30 feet each side
  - S02 forested riparian 30 feet each side
  - S03 forested riparian 15 feet on east side and greater than 30 feet on west side
- Wetland fringe. Characteristics: Wetland 3 directly abuts S03, Locust Creek
- Habitat for:
  - Federally Listed species. Indiana and Northern long eared bats Explain findings: In range of these species.
  - Fish/spawn areas. Explain findings: *Click here to enter text.*
  - Other environmentally-sensitive species. Explain findings: *Click here to enter text.*
  - Aquatic/wildlife diversity. Explain findings: Riparian area habitat for small mammals, reptiles and amphibians and stream provides aquatic fauna habitat.

**2. Characteristics of wetlands adjacent to non-TNW that flow directly or indirectly into TNW**

**(i) Physical Characteristics:**

**(a) General Wetland Characteristics:**

Properties:

Wetland size:

Wetland 01, PEM, 0.17 acres, maybe considered low due to wetland plant species

Wetland 02, PFO, 0.11 acres, maybe considered moderate; however, low quality wetland trees

Wetland 03, PFO, 0.46 acres, maybe considered moderate; low quality wetland trees

Wetland type. Explain: see above

Wetland quality. Explain: see above

Project wetlands cross or serve as state boundaries. Explain: *Click here to enter text.*

**(b) General Flow Relationship with Non-TNW:**

Flow is: Ephemeral Flow Explain: water likely flows between the wetland and the non-TNW during storm events as well as high water events.

Surface flow is: Discrete and Confined

Characteristics: *Click here to enter text.*

Subsurface flow: *Choose an item.* Explain findings: *Click here to enter text.*

Dye (or other) test performed: *Click here to enter text.*

**(c) Wetland Adjacency Determination with Non-TNW:**

Directly abutting

Not directly abutting

Discrete wetland hydrologic connection. Explain: *Click here to enter text.*

Ecological connection. Explain: *Click here to enter text.*

Separated by berm/barrier. Explain: *Click here to enter text.*

**(d) Proximity (Relationship) to TNW**

Project wetlands are 5-10 river miles from TNW.

Project waters are 2-5 aerial (straight) miles from TNW.

Flow is from: Wetland to Navigable Waters

Estimate approximate location of wetland as within the 50 - 100-year floodplain.

**(ii) Chemical Characteristics:**

Characterize wetland system (e.g., water color is clear, brown, oil film on surface; water quality; general watershed characteristics; etc.). Explain: *Click here to enter text.*

Identify specific pollutants, if known: Pollutants for this area would include agricultural runoff from surrounding fields as well as possible oil and fuel runoff from adjacent road.

**(iii) Biological Characteristics. Wetland supports (check all that apply):**

- Riparian buffer. Characteristics (type, average width): *Click here to enter text.*
- Vegetation type/percent cover. Explain: *Click here to enter text.*
- Habitat for:
- Federally Listed species. Indiana and Northern long eared bats Explain findings: In ranges of the species
- Fish/spawn areas. Explain findings: *Click here to enter text.*
- Other environmentally-sensitive species. Explain findings: *Click here to enter text.*
- Aquatic/wildlife diversity. Explain findings: Habitat for reptiles, amphibians and small mammals.

**3. Characteristics of all wetlands adjacent to the tributary (if any)**

All wetland(s) being considered in the cumulative analysis: 3

Approximately (0.74) acres in total are being considered in the cumulative analysis.

For each wetland, specify the following:

<u>Directly abuts? (Y/N)</u>	<u>Size (in acres)</u>	<u>Directly abuts? (Y/N)</u>	<u>Size (in acres)</u>
Wetland 1 N	0.17		
Wetland 2 N	0.11		
Wetland 3 Y	0.46		

Summarize overall biological, chemical and physical functions being performed: As part of their biological functions, these wetlands support plant diversity, resting, foraging and nesting habitat for many bird, mammal and reptile, amphibian and invertebrate species. Furthermore, these wetlands store storm water, slow the velocity of storm water, facilitate groundwater recharge, trap sediments and control pollution.

**C. SIGNIFICANT NEXUS DETERMINATION**

A significant nexus analysis will assess the flow characteristics and functions of the tributary itself and the functions performed by any wetlands adjacent to the tributary to determine if they significantly affect the chemical, physical, and biological integrity of a TNW. For each of the following situations, a significant nexus exists if the tributary, in combination with all of its adjacent wetlands, has more than a speculative or insubstantial effect on the chemical, physical and/or biological integrity of a TNW. Considerations when evaluating significant nexus include, but are not limited to the volume, duration, and frequency of the flow of water in the tributary and its proximity to a TNW, and the functions performed by the tributary and all its adjacent wetlands. It is not appropriate to determine significant nexus based solely on any specific threshold of distance (e.g. between a tributary and its adjacent wetland or between a tributary and the TNW). Similarly, the fact an adjacent wetland lies within or outside of a floodplain is not solely determinative of significant nexus.

**Draw connections between the features documented and the effects on the TNW, as identified in the *Rapanos* Guidance and discussed in the Instructional Guidebook. Factors to consider include, for example:**

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to carry pollutants or flood waters to TNWs, or to reduce the amount of pollutants or flood waters reaching a TNW?
- Does the tributary, in combination with its adjacent wetlands (if any), provide habitat and lifecycle support functions for fish and other species, such as feeding, nesting, spawning, or rearing young for species that are present in the TNW?

- Does the tributary, in combination with its adjacent wetlands (if any), have the capacity to transfer nutrients and organic carbon that support downstream foodwebs?
- Does the tributary, in combination with its adjacent wetlands (if any), have other relationships to the physical, chemical, or biological integrity of the TNW?

*Note: the above list of considerations is not inclusive and other functions observed or known to occur should be documented below:*

1. **Significant nexus findings for non-RPW that has no adjacent wetlands and flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary itself, then go to Section III.D: *Click here to enter text.*
2. **Significant nexus findings for non-RPW and its adjacent wetlands, where the non-RPW flows directly or indirectly into TNWs.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: The two ephemeral streams (S01 and S02) flow directly or indirectly to an RPW (S03). Wetland 01 drains into S01 that flows directly into an RPW (S03) and Wetland 02 drains into S02 that flows directly into S01 that flow directly to an RPW (S03).
3. **Significant nexus findings for wetlands adjacent to an RPW but that do not directly abut the RPW.** Explain findings of presence or absence of significant nexus below, based on the tributary in combination with all of its adjacent wetlands, then go to Section III.D: *Click here to enter text.*

**D. DETERMINATIONS OF JURISDICTIONAL FINDINGS. THE SUBJECT WATERS/WETLANDS ARE (CHECK ALL THAT APPLY):**

1. **TNWs and Adjacent Wetlands.** Check all that apply and provide size estimates in review area:
  - TNWs: # linear feet # width (ft), Or, # acres.
  - Wetlands adjacent to TNWs: # acres.
2. **RPWs that flow directly or indirectly into TNWs.**
  - Tributaries of TNWs where tributaries typically flow year-round are jurisdictional. Provide data and rationale indicating that tributary is perennial: Locust Creek is a perennial blue line stream on the USGS map with a drainage area greater than 11 square miles and average annual rainfall of 45 inches.
  - Tributaries of TNW where tributaries have continuous flow “seasonally” (e.g., typically three months each year) are jurisdictional. Data supporting this conclusion is provided at Section III.B. Provide rationale indicating that tributary flows seasonally: *Click here to enter text.*

Provide estimates for jurisdictional waters in the review area (check all that apply):

- Tributary waters: S03, Locust Creek (perennial, RPW) 726 linear feet 24 width (ft)

- Other non-wetland waters: # acres.

Identify type(s) of waters: *Click here to enter text.*

**3. Non-RPWs<sup>8</sup> that flow directly or indirectly into TNWs.**

- Waterbody that is not a TNW or an RPW, but flows directly or indirectly into a TNW, and it has a significant nexus with a TNW is jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide estimates for jurisdictional waters within the review area (check all that apply):

- Tributary waters: S01 (ephemeral Non-RPW) 853 linear feet 2 width (ft)  
S02 (ephemeral Non-RPW) 293 linear feet 1 width (ft)

- Other non-wetland waters: # acres.

Identify type(s) of waters: *Click here to enter text.*

**4. Wetlands directly abutting an RPW that flow directly or indirectly into TNWs.**

- Wetlands directly abut RPW and thus are jurisdictional as adjacent wetlands.

<sup>8</sup>See Footnote # 3.

- Wetlands directly abutting an RPW where tributaries typically flow year-round. Provide data and rationale indicating that tributary is perennial in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: Wetland 03 is located on a stream terrace directly above Locust Creek and had overflow channels back into Locust Creek.
- Wetlands directly abutting an RPW where tributaries typically flow “seasonally.” Provide data indicating that tributary is seasonal in Section III.B and rationale in Section III.D.2, above. Provide rationale indicating that wetland is directly abutting an RPW: *Click here to enter text.*

Provide acreage estimates for jurisdictional wetlands in the review area: 0.46 acres.

**5. Wetlands adjacent to but not directly abutting an RPW that flow directly or indirectly into TNWs.**

- Wetlands that do not directly abut an RPW, but when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Provide acreage estimates for jurisdictional wetlands in the review area: # acres.

**6. Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs.**

- Wetlands adjacent to such waters, and have when considered in combination with the tributary to which they are adjacent and with similarly situated adjacent wetlands, have a significant nexus with a TNW are jurisdictional. Data supporting this conclusion is provided at Section III.C.

Wetland 01 – PEM (Wetlands adjacent to non-RPW that flow directly or indirectly into TNWs) - .17 acres

Wetland 02 – PFO (Wetlands adjacent to non-RPW that flow directly or indirectly into TNWs) - .11 acres

Provide estimates for jurisdictional wetlands in the review area: 0.28 acres.

**7. Impoundments of jurisdictional waters.<sup>9</sup>**

As a general rule, the impoundment of a jurisdictional tributary remains jurisdictional.

- Demonstrate that impoundment was created from “waters of the U.S.,” or
- Demonstrate that water meets the criteria for one of the categories presented
- Demonstrate that water is isolated with a nexus to commerce (see E below).

**E. ISOLATED [INTERSTATE OR INTRA-STATE] WATERS, INCLUDING ISOLATED WETLANDS, THE USE, DEGRADATION OR DESTRUCTION OF WHICH COULD AFFECT INTERSTATE COMMERCE, INCLUDING ANY SUCH WATERS (CHECK ALL THAT APPLY):<sup>10</sup>**

- which are or could be used by interstate or foreign travelers for recreational or other purposes.
- from which fish or shellfish are or could be taken and sold in interstate or foreign commerce.
- which are or could be used for industrial purposes by industries in interstate commerce.
- Interstate isolated waters. Explain: *Click here to enter text.*
- Other factors. Explain: *Click here to enter text.*

**Identify water body and summarize rationale supporting determination:** *Click here to enter text.*

Provide estimates for jurisdictional waters in the review area (check all that apply):

- Tributary waters: # linear feet # width (ft).
- Other non-wetland waters: # acres.

Identify type(s) of waters: *Click here to enter text.*

<sup>9</sup> To complete the analysis refer to the key in Section III.D.6 of the Instructional Guidebook.

<sup>10</sup> Prior to asserting or declining CWA jurisdiction based solely on this category, Corps Districts will elevate the action to Corps and EPA HQ for review consistent with the process described in the Corps/EPA Memorandum Regarding CWA Act Jurisdiction Following Rapanos.

Wetlands: # acres.

**F. NON-JURISDICTIONAL WATERS, INCLUDING WETLANDS (CHECK ALL THAT APPLY):**

- If potential wetlands were assessed within the review area, these areas did not meet the criteria in the 1987 Corps of Engineers Wetland Delineation Manual and/or appropriate Regional Supplements.
- Review area included isolated waters with no substantial nexus to interstate (or foreign) commerce.
  - Prior to the Jan 2001 Supreme Court decision in "SWANCC," the review area would have been regulated based solely on the "Migratory Bird Rule" (MBR).
- Waters do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction. Explain:
  - Wetland 4 is PEM 0.03 acres
  - Wetland 5 is PEM 0.05 acres
  - Wetland 6 is PEM 0.07 acres
  - Wetlands 4, 5, and 6 are located in poorly drained depressions on the landscape and do not appear to have a surface water connection.
- Other: (explain, if not covered above): *Click here to enter text.*

Provide acreage estimates for non-jurisdictional waters in the review area, where the sole potential basis of jurisdiction is the MBR factors (i.e., presence of migratory birds, presence of endangered species, use of water for irrigated agriculture), using best professional judgment (check all that apply):

- Non-wetland waters (i.e., rivers, streams): # linear feet # width (ft).
- Lakes/ponds: # acres.
- Other non-wetland waters: # acres. List type of aquatic resource: *Click here to enter text.*
- Wetlands: # acres.

Provide acreage estimates for non-jurisdictional waters in the review area that do not meet the "Significant Nexus" standard, where such a finding is required for jurisdiction (check all that apply):

- Non-wetland waters (i.e., rivers, streams): # linear feet # width (ft).
- Lakes/ponds: # acres.
- Other non-wetland waters: # acres. List type of aquatic resource: *Click here to enter text.*
- Wetlands: 0.15 acres.

**SECTION IV: DATA SOURCES.**

**A. SUPPORTING DATA. Data reviewed for JD (check all that apply - checked items shall be included in case file and, where checked and requested, appropriately reference sources below):**

- Maps, plans, plots or plat submitted by or on behalf of the applicant/consultant: *Click here to enter text.*
- Data sheets prepared/submitted by or on behalf of the applicant/consultant.
  - Office concurs with data sheets/delineation report.
  - Office does not concur with data sheets/delineation report.
- Data sheets prepared by the Corps: *Click here to enter text.*
- Corps navigable waters' study: *Click here to enter text.*
- U.S. Geological Survey Hydrologic Atlas: *Click here to enter text.*
  - USGS NHD data.
  - USGS 8 and 12 digit HUC maps.
- U.S. Geological Survey map(s). Cite scale & quad name: *Click here to enter text.*
- USDA Natural Resources Conservation Service Soil Survey. Citation: *Click here to enter text.*
- National wetlands inventory map(s). Cite name: *Click here to enter text.*
- State/Local wetland inventory map(s): *Click here to enter text.*
- FEMA/FIRM maps: *Click here to enter text.*
- 100-year Floodplain Elevation is: *Click here to enter text.* (National Geodetic Vertical Datum of 1929)
