<sup>2</sup> If the navigable water is not subject to the ebb and flow of the tide and included on the District’s list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.

<sup>3</sup> A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.

<sup>4</sup> Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.

<sup>5</sup> Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

**D. Excluded Waters or Features**

Excluded waters ((b)(1) – (b)(12))<sup>4</sup>:

Exclusion Name	Exclusion Size	Exclusion <sup>5</sup>	Rationale for Exclusion Determination
LRL-2020-1043, STRM-LAI-05	82 feet	(b)(3) Ephemeral feature, including an ephemeral stream, swale, gully, rill, or pool	The stream is a first order stream with a small watershed, unstructured silt substrate and has a morphology typical of ephemeral stream in the region. The stream does not exhibit flow more than in response to precipitation.
LRL-2020-1043, STRM-LAI-06	197 feet	(b)(3) Ephemeral feature, including an ephemeral stream, swale, gully, rill, or pool	The stream is a first order stream with a small watershed, unstructured silt substrate and has a morphology typical of ephemeral stream in the region. The stream does not exhibit flow more than in response to precipitation.
LRL-2020-1043, STRM-LAI-07	235 feet	(b)(3) Ephemeral feature, including an ephemeral stream, swale, gully, rill, or pool	The stream is a first order stream with a small watershed, unstructured silt substrate and has a morphology typical of ephemeral stream in the region. The stream does not exhibit flow more than in response to precipitation.
LRL-2020-1043, WET-LAI-08	0.06 acres	(b)(1) Non-adjacent wetland	The wetland is physically isolated in the landscape, and does not receive flooding from an a(1)-(3) waters. The wetland does not meet the definition of adjacent wetlands per 33 CFR 328.3 (c)(1)(i)(ii)(iii) or (iv), and is therefore excluded.
LRL-2020-1043, WET-LAI-09	0.003 acres	(b)(1) Non-adjacent wetland	The wetland abuts stream STRM-LAI-06, a (b)(3) excluded water, and does not receive flooding from an a(1)-(3) waters
