

**U.S. ARMY CORPS OF ENGINEERS  
REGULATORY PROGRAM  
APPROVED JURISDICTIONAL DETERMINATION FORM (INTERIM)  
NAVIGABLE WATERS PROTECTION RULE**

**I. ADMINISTRATIVE INFORMATION**

Completion Date of Approved Jurisdictional Determination (AJD): 10/8/2020  
 ORM Number: LRL-2020-639-scm  
 Associated JDs: N/A  
 Review Area Location<sup>1</sup>: State/Territory: Indiana City: Lebanon County/Parish/Borough: Boone County  
 Center Coordinates of Review Area: Latitude 40.137636 N Longitude -86.522641 W

**II. FINDINGS**

**A. Summary:** Check all that apply. At least one box from the following list MUST be selected. Complete the corresponding sections/tables and summarize data sources.

- The review area is comprised entirely of dry land (i.e., there are no waters or water features, including wetlands, of any kind in the entire review area). Rationale: N/A or describe rationale.
- There are “navigable waters of the United States” within Rivers and Harbors Act jurisdiction within the review area (complete table in Section II.B).
- There are “waters of the United States” within Clean Water Act jurisdiction within the review area (complete appropriate tables in Section II.C).
- There are waters or water features excluded from Clean Water Act jurisdiction within the review area (complete table in Section II.D).

**B. Rivers and Harbors Act of 1899 Section 10 (§ 10)<sup>2</sup>**

§ 10 Name	§ 10 Size	§ 10 Criteria	Rationale for § 10 Determination
N/A.	N/A.	N/A.	N/A.

**C. Clean Water Act Section 404**

Territorial Seas and Traditional Navigable Waters ((a)(1) waters): <sup>3</sup>			
(a)(1) Name	(a)(1) Size	(a)(1) Criteria	Rationale for (a)(1) Determination
N/A.	N/A.	N/A.	N/A.

Tributaries ((a)(2) waters):			
(a)(2) Name	(a)(2) Size	(a)(2) Criteria	Rationale for (a)(2) Determination
Prairie Creek	4,446	linear feet	(a)(2) Perennial tributary contributes surface water flow directly or indirectly to an (a)(1) water in a typical year.
UNT 1 to Prairie Creek	483	linear feet	(a)(2) Intermittent tributary contributes

<sup>1</sup> Map(s)/figure(s) are attached to the AJD provided to the requestor.  
<sup>2</sup> If the navigable water is not subject to the ebb and flow of the tide or included on the District’s list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.  
<sup>3</sup> A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD Form.

Tributaries ((a)(2) waters):				
(a)(2) Name	(a)(2) Size		(a)(2) Criteria	Rationale for (a)(2) Determination
			surface water flow directly or indirectly to an (a)(1) water in a typical year.	consultants during normal conditions). UNT 1 to Prairie Creek contributes flow downstream into Prairie Creek, which flows into Sugar Creek, which flows into the Wabash River (TNW) (see Section IIIB & Waters Report, photos 675-677, 679, 681).
UNT 3 to Prairie Creek	30	linear feet	(a)(2) Intermittent tributary contributes surface water flow directly or indirectly to an (a)(1) water in a typical year.	Tributary contains intermittent flow throughout the year (as evidenced by numerous aerials listed in Section IIIA below, and multiple observations by the delineation consultants during normal conditions). UNT 3 to Prairie Creek contributes flow downstream into Prairie Creek, which flows into Sugar Creek, which flows into the Wabash River (TNW) (see Section IIIB & Waters Report, photos 141 – 142).
UNT 4 to Prairie Creek	1,460	linear feet	(a)(2) Intermittent tributary contributes surface water flow directly or indirectly to an (a)(1) water in a typical year.	Tributary contains intermittent flow throughout the year (as evidenced by numerous aerials listed in Section IIIA below, and multiple observations by the delineation consultants during normal conditions). UNT 4 to Prairie Creek contributes flow downstream into Prairie Creek, which flows into Sugar Creek, which flows into the Wabash River (TNW) (see Section IIIB and WR photos 256, 259, 260, 263, 479, 480).
Spring Creek	1,014	linear feet	(a)(2) Perennial tributary contributes surface water flow directly or indirectly to an (a)(1) water in a typical year.	Tributary contains perennial flow throughout the year (as evidenced by numerous aerials listed in Section IIIA below, and multiple observations by the delineation consultants during normal conditions). Spring Creek contributes flow downstream into Sugar Creek, which flows into the Wabash River (TNW) (see Section IIIB & WR photos 299-300, 307, 446-447).
UNT 1 to Spring Creek	29	linear feet	(a)(2) Intermittent tributary contributes surface water flow directly or indirectly to an (a)(1) water in a typical year.	Tributary contains intermittent flow throughout the year (as evidenced by numerous aerials listed in Section IIIA below, observations by delineation consultant during normal conditions, and observations by Corps staff during dryer than normal conditions). UNT 1 to Spring Creek contributes flow downstream into Spring Creek, which flows into Sugar Creek, which flows into the Wabash River (TNW) (see Section IIIB & WR photos 320-321).

Lakes and ponds, and impoundments of jurisdictional waters ((a)(3) waters):				
(a)(3) Name	(a)(3) Size		(a)(3) Criteria	Rationale for (a)(3) Determination
N/A.	N/A.	N/A.	N/A.	N/A.

Adjacent wetlands ((a)(4) waters):				
(a)(4) Name	(a)(4) Size		(a)(4) Criteria	Rationale for (a)(4) Determination
Wetland A-1	0.011	acre(s)	(a)(4) Wetland abuts an (a)(1)-(a)(3) water.	Emergent wetland boundary abuts UNT 1 to Prairie Creek, an (a)(2) water, and serves as part of the riparian buffer for the tributary (see Waters Report, Aerial Map C-49).
Wetland A-2	0.089	acre(s)	(a)(4) Wetland abuts an (a)(1)-(a)(3) water.	Emergent wetland boundary abuts UNT 1 to Prairie Creek, an (a)(2) water, and serves as part of the riparian buffer for the tributary (see Waters Report, Aerial Map C-49).
Wetland Y	0.045	acre(s)	(a)(4) Wetland abuts an (a)(1)-(a)(3) water.	Scrub-shrub wetland boundary abuts UNT 4 to Prairie Creek, an (a)(2) water, and serves as the riparian buffer for the tributary (see Waters Report, Aerial Map C-67).
Wetland AA	0.065	acre(s)	(a)(4) Wetland abuts an (a)(1)-(a)(3) water.	Emergent wetland boundary abuts UNT 4 to Prairie Creek, an (a)(2) water, and serves as the riparian buffer for the tributary (see Waters Report, Aerial Map C-67).
Wetland AF	0.194	acre(s)	(a)(4) Wetland abuts an (a)(1)-(a)(3) water.	Emergent wetland boundary abuts UNT 1 to Spring Creek, an (a)(2) water, and serves as part of the riparian buffer for the tributary (see Waters Report, Aerial Map C-73).

**D. Excluded Waters or Features**

Excluded waters ((b)(1) – (b)(12)): <sup>4</sup>				
Exclusion Name	Exclusion Size		Exclusion <sup>5</sup>	Rationale for Exclusion Determination
UNT 2 to Prairie Creek	99	linear feet	(b)(3) Ephemeral feature, including an ephemeral stream, swale, gully, rill, or pool.	Stream exhibits ephemeral flow in a typical year (see APT Data Reports, Waters Report photos 633 & 634).
UNT 5 to Prairie Creek	197	linear feet	(b)(3) Ephemeral feature, including an ephemeral stream, swale, gully, rill, or pool.	Stream exhibits ephemeral flow in a typical year (see APT Data Reports, Waters Report photos 270 & 271).
UNT 6 to Prairie Creek	18	linear feet	(b)(3) Ephemeral feature, including an ephemeral stream, swale, gully, rill, or pool.	Stream exhibits ephemeral flow in a typical year (see APT Data Reports, Waters Report photos 273 & 693).
UNT 2 to Spring Creek	147	linear feet	(b)(3) Ephemeral feature, including an ephemeral stream, swale, gully, rill, or pool.	Stream exhibits ephemeral flow in a typical year (see APT Data Reports, Waters Report, photos 353-354).

<sup>4</sup> Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.

<sup>5</sup> Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

**B. Typical year assessment(s):** The APT was utilized for three site visits. The data shows normal climatic conditions for both the 7/24/2019 and 4/24/2020 delineation site visits (see [2019-07-24\\_APT Data.pdf](#) and [2020-04-24\\_APT Data.pdf](#)). The data shows dryer than normal climatic conditions for the 10/1/2020 Corps staff site visit (see [2020-09-29\\_APT Data.pdf](#)). Therefore, consultant observations, Corps staff observations, and APT data indicate that the hydrologic conditions observed at the site for all dates are considered “typical year” conditions.

**C. Additional comments to support AJD:** [N/A](#) or provide additional discussion as appropriate.
