- There are “navigable waters of the United States” within Rivers and Harbors Act jurisdiction within the review area (complete table in section II.B).
- There are “waters of the United States” within Clean Water Act jurisdiction within the review area (complete appropriate tables in section II.C).
- There are waters or water features excluded from Clean Water Act jurisdiction within the review area (complete table in section II.D).

¹ Map(s)/Figure(s) are attached to the AJD provided to the requestor.

² If the navigable water is not subject to the ebb and flow of the tide and included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.

³ A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.

⁴ Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.

⁵ Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

D. Excluded Waters or Features

Excluded waters ((b)(1) – (b)(12))⁴:

Exclusion Name	Exclusion Size	Exclusion ⁵	Rationale for Exclusion Determination
Site S01 (Ephemeral 1)	82 feet	(b)(3) Ephemeral feature, including an ephemeral stream, swale, gully, rill, or pool	Ephemeral 1 only contains surface water flowing or pooling in direct response to precipitation. Ephemeral Stream 1 is a (b)(3) water and is therefore excluded from the rule.

III. SUPPORTING INFORMATION

A. Select/enter all resources that were used to aid in this determination and attach data/maps to this document and/or references/citations in the administrative record, as appropriate.

Information submitted by, or on behalf of, the applicant/consultant: Permit Amendment (LRL-2019-1033-ncc), US 127 Rockfall Removal Project, Kentucky Transportation Cabinet, Russell County, KY, dated August 21, 2020.

This information is sufficient for purposes of this AJD.

B. Typical year assessment(s): The Antecedent Precipitation Tool (APT) was used to evaluate climatic conditions for the date the consultant completed initial delineation field work, February 12, 2020. The APT analysis shows that the assessment was performed during the wet season, and precipitation and climatic conditions were within the normal periodic range, therefore typical year conditions were present.

WUHPD was reviewed for February 12, 2020 to see the precipitation totals for the days leading up to the assessment dates and site visits. On February 12, 2021, the Bluegrass Airport Station recorded 1.3" of rain in the 3 days prior to the assessment date. Water was observed in the stream channel, indicating that the presence of water in ephemeral tributaries would not be unusual given the function of ephemeral tributaries in the landscape.
